

WELDED ALUMINUM LETTERING

Welded Aluminum Letters can be customer or special design, fabricated from any of our standard patterns. These letters are very popular with architects and designers due to the fact they are much lighter than cast letters and have the same long lasting material. Fabricated letters are economical, corrosion resistant and fabricated from aluminum sheet of either 3003T5 or 6061T5. All our letters are heliarc electric welded with the seams and sides mechanically ground smooth then prepared to receive one of our high quality finishes.
