

# soft-glo<sup>®</sup> lighting for metal graphics

Our Soft-Glo lighting system provides a soft, rear-lit halo effect for either cast or fabricated letters or graphic elements. This system can be adapted to any application and is the perfect answer for illumination without using neon or floodlights. Contact your A.R.K. representative for a quotation on your project's requirements.

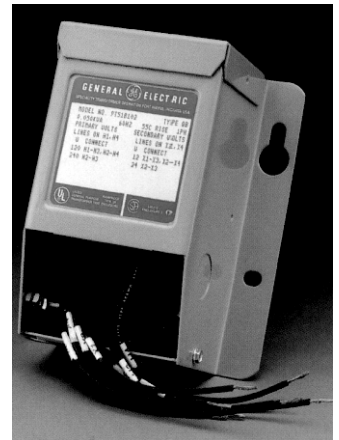

The Soft-Glo lighting system utilizes a flexible light tape with changeable bulbs set into the rear cavity of the letter. The bulbs, placed at two inch intervals, produce up to twelve watts of brilliant light per foot.

For installation, each letter is secured with silicone adhesive into pre-drilled holes in the wall. (Drilling templates can be provided.) One small hole is drilled completely through the wall for the wires to pass through and allows them to connect together behind the wall. (These holes are "patched" with silicone after the wiring is completed.) The collars hold the letter approximately 1-1/2" to 2" from the wall.

"J" boxes are utilized behind the wall to gather and consolidate incoming wiring from the individual letters. Depending in their size, one box will accommodate six to ten letters. Multiple "J" boxes can be used for larger groupings of letters.

The transformer mounts to a wall surface with screws and appropriate anchors. Final connections are made from the letter wiring and the lines from your electrical box. **NOTE: ANY AND ALL ELECTRICAL WORK MUST BE DONE BY A LICENSED ELECTRICAL CONTRACTOR.**
